CSIT-NEWSLETTER WEPBAGE DOCUMENTATION

The Newsletter which has been developed using HTML, JavaScript and TailwindCSS has four separate files, CSIT-Newsletter.html(Main page), events.js, scrolling-functionality.js and MUST-CSIT logo.png. Each of which will be explained on its own.

CSIT_Newsletter.html

This is the file containing the main and only page, this was done with the instructions to keep it as simple as possible. It contains a header , that also acts as a navigation panel that switches to a hamburger menu depending on the sze of the screen, then the two main sections are the upcoming events and the recent activities section, both of which are easily accessible. The events are uploaded unto the page using a Database system created on the webapp "Supabase".

events.js

This is the main JavaScript file that allows the upload of the events from the database as well the appearance of each event in the sections respectively.

Scrolling-functionality.js

This just enables the navigation from the top of the page to the sections to be smooth and a self scroll.

MUST-CSIT logo.png

This is self explanatory.
